Division Act	ICA-40
Section	2(a)(41)
File	
Public Availability	3/22/73

Dear Mr. Mostoff:

Paul Revere Investors Inc.
File No. 811-2197

Paul Revere Investors Inc. (the "Company") is a closed-end, non-diversified management investment company which was organized in May, 1971 and went public through a public offering of its shares on September 30, 1971. Under its investment policy it invests principally in long-term, fixed-income debt obligations which have equity features and which are acquired in direct placements. When fully invested in accordance with this policy, which is expected to take approximately two years from the date of the public offering, the Company must have at least 85% of its assets invested in direct placements and in equity securities acquired as a result of the exercise of warrants, options or conversion rights acquired in direct placements.

The Company also has an automatic dividend investment plan (the "Plan") under which participating shareholders may automatically reinvest all dividends in shares of the Company's stock. Such reinvestment is at net asset value or at market price, whichever is lower. Depending upon which is lower, the Company issues additional shares or the agent for the participants purchases shares in the market. Current policy is to pay dividends monthly.

Section 2(a)(41) of The Investment Company Act of 1940 (the "Act") provides in pertinent part as follows:

"'Value,' with respect to assets of registered investment companies --- means -- (B) -- (i) with respect to securities for which market quotations are readily available, the market value of such securities; and (ii) with respect to other securities and assets, fair value as determined in good faith by the board of directors."

Section 23(b) of the Act provides in pertinent part as follows:

"No registered closed-end company shall sell any common stock of which it is the issuer at a price below the current net asset value of such stock --- (which net asset value shall be determined as of a time within forty-eight hours, excluding Sundays and holidays, next preceding the time of such determination), except --- under such other circumstances as the Commission may permit by rules and regulations or orders for the protection of investors."

Owners of the Company's shares, as well as potential investors, like to know the current net asset value per share. Since securities acquired in direct placements fall within the category of "other securities and assets" in Subsection 2(a)(41)(B)(ii) of the Act, their fair value is that "determined in good faith by the board of directors". Thus, the longer the period that has elapsed since the most recent determination by the board of directors ("Board"), the more out of date is the most recent value that can be given.

Further, participants in the Plan are entitled to shares at the lower of net asset value per share or market value. It is therefore necessary to determine net asset value to establish which cost basis is applicable, and, if this is net asset value, the actual issue price of the shares payable as a dividend. Under the provisions of Section 23(b) of the Act the net asset value for issue purposes must be determined as of a time within forty-eight hours of the time of issue. This has caused the Board to meet within forty-eight hours prior to

each monthly dividend payment to value the restricted securities.

Need for frequent meetings on a restrictive time schedule to value restricted securities has proved burdensome to the members of the Board, particularly to those who are not interested parties of the Company or its investment adviser. This was one of the principal considerations in the recent resignation of one director, and management fears that it will lose the services of others and will not be able to replace them with new directors of comparable stature, ability and value to the Company unless an alternative is devised. It would appear that some reasonable alternative might be agreed upon which would provide necessary safeguards to protect the public and yet permit more frequent determinations of net asset value.

The Company proposes that the Board create a Securities Valuation Committee ("Committee") delegating to it certain powers and responsibilities to value restricted securities between meetings of the Board under guidelines established by the Board. The exact composition of the Committee could be left to the Board but it is contemplated that both the Board and management be represented.

The foregoing procedure would appear to be within the contemplation of the terms of Investment Company Act Release No. 5847 dated October 21, 1969 where it is stated:

"While the board may, consistent with this responsibility, determine the method of valuing each issue of restricted security in the company's portfolio, it must continually review the appropriateness of any method so determined. The actual calculations may be made by persons acting pursuant to the directions of the board."

The Board would meet no less often than quarterly to review, and if necessary amend, the guidelines. Further, a provision designed to provide some flexibility and adjustment of the method of valuation between meetings of the Board, to protect against unusual and unexpected fluctuations in value of any restricted securities in the portfolio would be included.

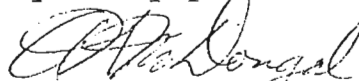

It should be noted that a substantial majority of the value of the Company's direct placements is, and for an indefinite period of time will be, in debt securities rather than in equity securities. Though many of the same considerations apply in valuation of restricted debt securities as in the valuation of restricted equity securities, a difference exists which was recognized in the opening paragraph of Release No. 5847 mentioned above. This directed the application of the release toward the problems created by the acquisition of restricted equity securities. Their fair value is related to considerations such as public acceptance and earnings which tend to make values volatile. The fair value of restricted debt securities on the other hand, particularly under the Company's investment policy where restricted debt securities will ordinarily be held to maturity, depends basically upon the solvency of the issuer and is relatively stable.

Attached hereto as Exhibit A is a copy of guidelines proposed for initial adoption by the Company's Board to implement the proposed procedures. It is felt that the application of these guidelines between meetings of the Board will permit determination of net asset value within acceptable limits. If experience indicates that this is not accomplished, the Board on its own, or at the request of management, can amend them at any time to increase accuracy. The key to Schedule I to the guidelines is a mechanical aid rather than a rigid framework and can also be modified as needed. Special instructions under Footnote E. would be expected to be used frequently.

Attached hereto as Exhibit B are copies of valuation sheets showing the value of restricted securities owned by the Company as determined by the Board at each valuation from the date of acquisition of such restricted securities to the date of this letter. It will be noted that with one exception the only change in valuation of any debt security from cost has been to amortize original issue discount. The only changes in valuation of equity securities relate to situations where there is a market in the same class of security and, in one instance, a situation where it is expected that there will be a market reasonably soon.

The Company requests approval of the procedures proposed in Paragraph D. hereof. If it is felt that further limitations or restrictions are needed for the protection of stockholders or others, representatives of the Company would be pleased to discuss these with the staff, as well as answer any further questions the staff may have. Your favorable consideration is respectfully requested.

Very truly yours,

A. Warren McDougal
Clerk

AWM:aml

Based upon the foregoing and the attachments thereto, we will not recommend that the Commission take any action against the Company under Section 2(a)(41) of the Act, if it establishes the proposed Securities Valuation Committee and procedures for the purpose of valuation of the Company's restricted securities between meetings of the Board of Directors; provided however that the "Guidelines for use by the Securities Valuation Committee" make it clear that, in addition to the duties and procedures specified by the second paragraph of the Guidelines, the Committee has the duty and responsibility to advise the Board of Directors at any time it believes that the methods established for valuing any restricted security or securities are erroneous so that the Board may determine whether such methods should be modified.

We note that the proposed Guidelines and Committee apply specifically to the valuation of restricted securities. However, Section 2(a)(41) also requires that unrestricted securities for which there are not market quotations readily available must also be valued by the Board of Directors (see Investment Company Act Release No. 6295). In this regard, we assume that the proposed valuation procedure for restricted securities would also be used for unrestricted securities for which no market quotations are readily available.

Alan Rosenblat, Chief Counsel
Division of Investment Management Regulation

By 
Peter M. Sullivan, Attorney

PAUL REVERE INVESTORS INC.
GUIDELINES
for use by
SECURITIES VALUATION COMMITTEE
in valuing
RESTRICTED SECURITIES

The value to be given restricted securities is "fair value" which shall mean their inherent worth without regard to the restrictive feature, adjusted for any diminution in value resulting from the restrictive feature. The method of valuing each restricted security in the Company's portfolio will be established by the directors not less often than quarterly. The Committee will follow the method established in valuing each restricted security until a new method is established by the directors or in accordance with the following paragraph.

The Committee shall have the duty and responsibility to keep current on all factors which may have an effect on fair value of restricted securities in the Company's portfolio. If the Committee determines that there has been a change in such factors causing the net asset value of the Company determined under the methods established by the directors to vary more than 1% from what the Committee deems net asset value to be, no net asset value will be published or otherwise used until the methods which the Committee deems erroneous have been reviewed by a majority of the Board and either affirmed or modified by them. Such review and affirmation or modification may be accomplished by telephone, letter or other means of communication and shall be noted in the official records of the Committee, giving the names of those directors approving and disapproving. If agreement is not obtained from a majority of the Board, determination shall be deferred until agreement is obtained or until the next regular or special meeting of the Board.

The initial method established for valuing each restricted security in the Company's portfolio is set forth in Schedule I attached. Restricted securities purchased subsequent to any meeting of the Board shall, until the next following meeting of the Board, be valued as follows:

Debt securities - Cost plus accrued amortization of original issue discount, if any.

Preferred Stock - Cost plus accrued amortization of original issue discount, if any.

Common Stock - Cost or, if there is a market in unrestricted securities of the same class, a value discounted from market value in the same proportion as cost was discounted from market on the date of the firm agreement to purchase.

Warrants or Options - Cost, or if there is a market in unrestricted securities of the same class or of the same class as the underlying securities, (i) a value discounted from market value in the same proportion as cost was discounted from market on the date of the firm agreement to purchase or (ii) a value equal to cost plus or minus one-fourth of the difference between the market value of securities of the same class as the underlying security on the date of the firm agreement to purchase and on the valuation date (but never less than zero), whichever is applicable.

The Board of Directors
of Paul Revere Investors Inc.
